Synopsis: Walnuts

William works for the government. He analyzes events that seem to be outliers or have no immediate explanation. He receives a message that people in Montana reported seeing strange flying objects they were very small. William decides to investigate personally. His decision would change his life and the lives of all mankind. William starts preparing his house for The Siege.

The aliens had started their offensive, true to their word. The aliens, whether vessels or beings are the size and shape of half a walnut. The world is soon inundated with millions of flying semi-intelligent bombs. While people try to survive and stay alive, the world leaders have discovered that the “walnuts” are not of this Earth. The exploded shells reveal that they are not a species, but a strange biomechanical object. Finally, the aliens communicate with one ominous phrase, “Are you ready?”

Humanity is ready – for a fight. Yet, there’s no way to mount a resistance. In the end, the aliens have “control” of 97% of the world’s population. There is virtually “nothing to kill or die for, no religion, no extreme political or economic beliefs.”

But, there are questions. Why did the aliens invade the Earth? What do they really want from us? Perhaps they came because that is their purpose. They end strife and suffering like all good parents, and we are their children. They are the new gods.
